Ceiling Fan Product Knowledge

Certifications

Indoor/outdoor fans are UL/ETL listed for use in damp locations.

Save energy and money, add comfort

SUMMER : CLOCKWISE

Circulates the air and creates a gentle cooling breeze. With a ceiling fan, 78° can feel 72°. Supplements or even replaces air conditioning.

WINTER : COUNTER - CLOCKWISE

Breaks up the stratification of heat on the ceiling and brings the warmth down to the people. Temperature variation ceiling to floor can be 15°. Room will be warmer at lower thermostat setting.

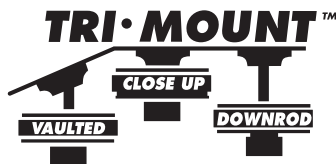

Energy efficiency data

Three energy efficiency data points are provided for all Design House fans. Comparison: 49" to 60" ceiling fans have airflow efficiencies ranging from approximately 51 to 176 CFM/Watt at high speed.

- **Airflow** at high speed measured in cubic feet per minute (CFM)
- **Electricity use** at high speeds (excluding light kit) measured in Watts
- **Airflow efficiency** at high speed measured in CFM/Watt

Mounting

Hugger fans mount directly to the ceiling with no downrod. Tri-mount adaptable feature allows the fan to be mounted with a downrod, in a close-up configuration or on a vaulted ceiling.

Kitchen Cabinet Product Knowledge

Natural characteristics

Joint lines are the natural result of wood expanding and contracting based on moisture in the air. They do not weaken or diminish the strength of the joint.

End grain surfaces and other softer areas of the wood accept more stain naturally, creating a darker appearance which adds to the character of the wood.

Telegraphing is the effect of the grain showing through the stain. Open or coarse wood grains, like oak, will "telegraph" more than closed or finer wood grains.

Mineral streaks are a naturally occurring variation in the grain caused by mineral deposits absorbed from the soil. After the finish is applied, the mineral streaks may appear lighter or darker than the rest of the wood.

Features

- Features 105° concealed 6 way adjustable soft close hinges which allow for smooth easy use.
- RTA cabinets offer high quality, durability, and materials with reduced overall cost.
- Adjustable shelves, easy glide drawer glides, optional slow close glides available.
- Single bracket, allows easy assembly in minutes, tightly secures cabinet components into one highly durable unit.
- Reversed raised panel door construction is a standard, high end feature.
- High-end ¾" solid face frame construction, ½" plywood sides, ⅝" plywood shelves, ⅜" solid wood dovetail drawer boxes.

Locks and Hardware Product Knowledge

Certifications

ANSI Grade 3 products are tested to meet grade 3 residential quality standards.

ANSI Grade 2 products are tested to meet grade 2 commercial quality standards.

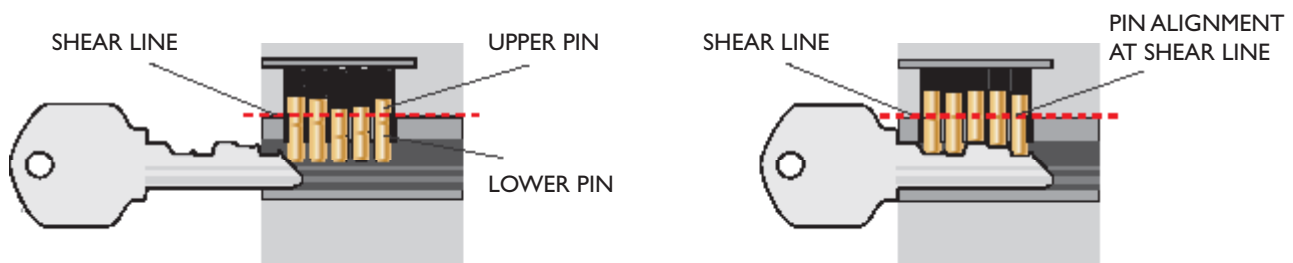

UL Listed products are rated for use on fire doors.

PVD

Physical vapor deposition, or PVD, is a finish that is applied most commonly to bathroom fixtures and entry hardware due to their frequent exposure to moisture and/or salt air. This finish creates a durable surface that is scratch, corrosion and tarnish resistant. It also aids in preventing finish discoloration or patina.

5-Pin high security

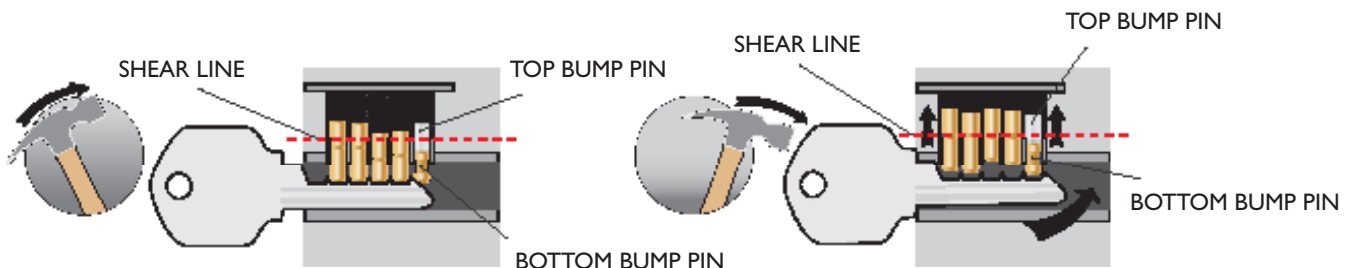

Design House locks are a pin tumbler lock design, which is a system that requires a specific key to move a series of pins to release the lock. When the proper key is inserted, the pins will be pushed upwards, lining up the pairs where the cylinder and the outer housing meet. This point is called the shear line. When the pin pairs meet at the shear line, it allows the keys to rotate the cylinder plug and enables the door knob to become unlocked.

Anti-bump technology

Unlawful entry can be gained by skillfully “bumping” a pin tumbler lock. This action sends a shockwave through the key which then transfers to the pins causing them to rise in the cylinder walls, past the shear line. Once the pins travel past the shear line, a simple twist of the key opens the lock.

Design Houses anti-bump pin technology prevents the pins from moving past the shear line when they are “bumped” by not allowing sufficient force to move the pins, resulting in a securely locked door.

Quartz Vanity Tops Features & Benefits

NEW

Quartz vanity tops are made of quartz and resin to create a durable top. This material does not chip or crack easily. Quartz is easy to clean due to its non-porous nature and is heat, stain, and scratch resistant. The integrated backplash prevents water damage and mold. Available in four sizes to fit Design House ready-to-assemble and fully-assembled vanities.
